

# Sarah Gurev

Machine learning for protein evolution and design

📞 (916) 838-9672

✉️ [sgurev@mit.edu](mailto:sgurev@mit.edu)

## Education

2020 - **Ph.D. Student in Electrical Engineering and Computer Science**, MIT.

Present **Master of Science in Electrical Engineering and Computer Science**, MIT 2023.

*Advisor: Debora Marks, Harvard Medical School, Broad Institute of Harvard and MIT*

Recipient of Richard H. Frazier Fellowship

Recipient of Takeda Fellowship

Recipient of Verena Fellowship

2016 - 2020 **Bachelor of Science in Computer Science**, *Biocomputation Track*, Stanford University.

Tau Beta Pi Engineering Honors Society

Research with Gill Bejerano, Alex Chan, Michael Levitt, and Ravi Majeti

## Publications

- N. Thadani\*, **S. Gurev\***, P. Notin\*, N. Youssef, N. Rollins, D. Ritter, C. Sander, Y. Gal, D. Marks (2023), **Learning from pre-pandemic data to forecast viral escape**, *Nature*.

\* indicates equal contribution

- N. Youssef, **S. Gurev**, ... J. Lemieux, J. Luban, M. Seaman, D. Marks (2023), **Deep generative models predict SARS-CoV-2 Spike infectivity and foreshadow neutralizing antibody escape**, *BioRxiv*.
- A. Shaw, H. Spinner, J. Shin, **S. Gurev**, N. Rollins, D. Marks (2023), **Removing bias in sequence models of protein fitness**, *BioRxiv*.
- S. Salman, **S. Gurev**, M. Arsalan, F. Dar, A. Chan (2021), **Liver exchange: A pathway to increase access to transplantation**, *Harvard Health Policy Review*.
- M. Linde, A. Fan, T. Köhnke, A. Trotman-Grant, **S. Gurev**, ... R. Majeti (2023), **Reprogramming cancer into antigen presenting cells as a novel immunotherapy**, *Cancer Discovery*.

Conference Papers and Extended Abstracts:

- **S. Gurev**, N. Youssef, N. Thadani ... J. Lemieux, J. Luban, M. Seaman, D. Marks (2023), **Learning from pre-pandemic data for the design and testing of variant-proof vaccines**, *Molecular Machine Learning Conference*. (Selected for Contributed Talk - Best 4 Papers)
- N. Thadani, N. Rollins, **S. Gurev**, P. Notin, Y. Gal, D. Marks (2021), **Viral evolution and antibody escape mutations using deep generative models**, *ICML Workshop on Computational Biology*. (Selected for Spotlight Talk)
- M. Linde, C. Dove, **S. Gurev**, P. Phan, F. Zhao, L. Miller, R. Majeti (2019), **Reprogramming leukemia cells into antigen presenting cells as a novel cancer vaccination immunotherapy**, *Blood*.

## Conferences

### Talks

- **Using the past to predict the future: unsupervised early warning of viral antibody escape.** *Boston Protein Design and Modeling Club*, 2024.  
<https://www.youtube.com/watch?v=ZgrTrBYZE48&t=150s>
- **Unsupervised viral antibody escape prediction for future-proof vaccines.** *Broad Institute Models, Inference, & Algorithms*, 2024.
- **Future-proof vaccine design using deep generative models of antibody escape.** *Contributed Talk, Andean School on Host-Pathogen Dynamics*, 2024.
- **Early warning of viral antibody escape from a biologically-informed computational framework & Pandemic surveillance discussion panel** *Invited Talk, Precision Public Health Symposium*, 2023.
- **Learning from pre-pandemic data for the design and testing of variant-proof vaccines.** *Contributed Talk (Best 4 papers), Molecular Machine Learning Conference*, 2023.
- **Using the past to predict the future: unsupervised early warning of viral antibody escape.** *NSF-Simons Center at Harvard*, 2023.
- **Predicting viral antibody escape: An integrated computational and experimental approach.** *Harvard Systems Biology*, 2023.
- **Early warning of viral antibody escape from a biologically-informed computational framework.** *Contributed Talk, Winter q-Bio*, 2023.
- **Learning from pre-pandemic data to forecast viral antibody escape.** *Broad Institute Primer on Medical and Population Genetics*, 2022.  
<https://www.youtube.com/watch?v=Nk0AaFcYetU>
- **Learning from pre-pandemic data to forecast viral antibody escape.** *Massachusetts Consortium on Pathogen Readiness* 2022.

### Posters

- **S. Gurev**, N. Youssef, N. Thadani ... J. Lemieux, J. Luban, M. Seaman, D. Marks, *Molecular Machine Learning Conference*, Learning from pre-pandemic data for the design and testing of variant-proof vaccines, 2023
- **S. Gurev**, N. Youssef, N. Thadani ... J. Lemieux, J. Luban, M. Seaman, D. Marks, *Vaccines Summit*, Learning from pre-pandemic data for the design and testing of variant-proof vaccines, 2023
- **S. Gurev**, N. Youssef, N. Thadani, ... J. Lemieux, J. Luban, M. Seaman, D. Marks, *Gordon Research Conference on Protein Engineering*, Design and testing of variant-proof vaccines from machine learning models on pre-pandemic data, 2023
- **S. Gurev**, N. Thadani, P. Notin, N. Youssef, N. Rollins, C. Sander, Y. Gal, D. Marks, *Winter q-Bio conference*, Early warning of viral antibody escape from a biologically-informed computational framework, 2023
- **S. Gurev**, J. Rodrigues, M. Levitt, *Stanford Bio-X Symposium*, Understanding determinants of affinity in receptor:chemokine interactions with molecular dynamics, 2018

### Media

- **A New AI tool that can predict viral variants.** *KCBS Radio*, 2023.  
<https://www.audacy.com/podcast/kcbs-radio-on-demand-011f4/episodes/a-new-ai-tool-that-can-predict-viral-variants-7fe31?>

## Service

- 2021 - 2023 **Mentor**, *Graduate Application Assistance Program*, MIT EECS.
- Advised many underrepresented PhD applicants each year throughout their grad school applications
- 2021 - 2023 **Mentor**, *Thriving Stars*, MIT EECS.
- Advise several newly admitted women graduate students each year
- 2016 - 2023 **Executive Director, Director & Event Supervisor**, *Golden Gate Science Olympiad*, Stanford University and UC Berkeley.
- Formed and directed a 501(c)(3) nonprofit that holds a yearly science competition for 800+ high school students
  - Managed a 12-person board of directors and over 150 volunteers, including running weekly meetings as well as coordinating the scientific events, developing timelines, and writing grants
  - Expanded community development efforts by founding the Adopt a Team program and coaching one of the first international Science Olympiad teams (team of girls from Peru)
  - Continued involvement in Science Olympiad volunteering for other competitions
- 2019 - 2020 **Founder, President & Teacher**, *Adopt a Science Olympiad Team at Stanford*, Stanford University.
- Founded an organization to create and coach Science Olympiad teams at schools in local underserved communities - a legacy which continues to coach new teams today
  - Led team of volunteers to partner with local charter schools and Lauren's House afterschool program (East Palo Alto nonprofit) to prepare students to compete in local competitions
  - Raised money for competition fees and engineering materials so student participation would be free
  - Taught weekly after school science lessons and weekend all-day-build-events designed around preparing students for Science Olympiad competition (coding in Scratch, balsa wood bridge building, bottle rocket building, anatomy, oceanography, etc.)
- 2009 - 2017 **Teaching Assistant**, *Diagnostic Preschool Classroom*, Special Education Program, Ralph Richardson Center.
- Provided individual instruction to special education preschoolers learning to walk and communicate (over 1000 hours)

---

## Research Experience

- 2020 - Present **PhD Student**, *MIT*, Debora Marks Lab, Harvard Medical School.
- Predicting trajectories of future viral evolution due to immune constraints using deep generative models of historic sequence diversity as well as structural and biochemical data available pre-pandemic
  - Early warning of SARS-CoV-2 escape variants by iteratively modeling and optimizing selection of emerging and forecasted sequences to be assayed for infectivity and antibody neutralization
  - Application of modeling of antibody escape to both design and test variant-proof vaccines
  - Modeling viral escape across disease-threat viral families
- 2020 - 2021 **Undergraduate Researcher**, *Liver Exchange Project*, Stanford University.
- Independently operationalized an optimal liver exchange with balanced risk algorithm
  - Helped finalize algorithm, converted algorithm into codebase, and ran simulations
  - Used matching algorithm to find previously missed matches for liver organ exchanges in Pakistan
- 2019 - 2020 **Undergraduate Researcher**, *Gill Bejerano Lab*, Stanford University.
- Independently developed an automated abstraction NLP tool that can identify patients undergoing a diagnostic odyssey from their clinical notes
- 2019 **Computational Biology Intern**, *Clinical Virology*, Gilead Sciences.
- Evaluated machine learning tools for peptide-MHC binding and presentation prediction and built a pipeline to investigate HIV peptide and HLA allele combinations for the HIV Vaccine project
  - Created MongoDB research database of HIV peptide and mutant data
  - Developed method to select mutation combinations critical to antibody binding to select subjects

- 2018 - 2019 **Undergraduate Researcher**, *Michael Levitt Lab*, Stanford University.
- Awarded competitive Stanford Major Grant based on research proposal surrounding the use of homology modeling and molecular dynamics simulations to probe determinants of affinity in receptor:chemokine interactions
  - Analyzed molecular modeling data using Python to work towards proposing mutations on CCL5 (chemokine with anti-HIV properties) that increase binding affinity for CCR5 (receptor)
- 2017 - 2018 **Undergraduate Researcher**, *Ravi Majeti Lab*, Stanford University.
- Reprogrammed leukemia cells into antigen presenting cells by C/EBP $\alpha$ -induced transdifferentiation
  - Gained experience with plasmid design, tissue culture, cloning, FACS, and lentiviral transduction
  - Designed and executed experiments to analyze metabolic profiles throughout transdifferentiation
- 2016 - 2017 **Undergraduate Researcher**, *Stanford Space Initiative Biology Team*, Stanford University.
- Researched synthesis chemistry for solid-phase enzymatic DNA synthesis with TdT
- 2015 - 2016 **Research Assistant**, *Marjorie Solomon Lab*, UC Davis MIND Institute.
- Analyzed data and assisted with MRI scans as part of Autism Spectrum Disorder studies

---

## Awards and Funding

### Graduate

- Verena Fellow-in-Residence Award (2024)
- Molecular Machine Learning Conference - Best Paper (2023)
- Takeda Fellowship (2022)
- Richard H. Frazier Fellowship (2020)

### Undergraduate

- Stanford Undergraduate Research Major Grant (2018)
- Tau Beta Pi Engineering Honors Society (2019)

### High School

- USA Biology Olympiad Semifinalist (2015)
- Science Olympiad National Champion (2016) and Top 5 (2012-2015)

---

## Research Mentorship

### PhD students

- Amber Shen, Harvard Medical School

### Research

- Associates
- Ben Kotzen, Massachusetts General Hospital

### Undergraduates

- Hailey Pan, MIT
- Aarushi Mehrotra, MIT

---

## Skills and Coursework

### Programming

#### Languages

- Advanced Experience: PYTHON
- Experience: BASH, R, C, C++, SQL, SPARK, MONGODB

## Libraries &

Tools ○ PYTORCH, SKLEARN, GIT, PANDAS, NUNMPY, SCIPY, SLURM

## Selected

Coursework ○ ML/NLP, Algorithms, Statistical Models in Biology, Matrix Theory, Systems, Databases  
○ Genetics, Cell and Molecular Biology, Organic Chemistry, Bioethics, Genomics
